High Current, Solid State Relay (Photo MOSFET) (60V/1.0A/0.5Ω)

Description

The ASSR-15XX Series is specifically designed for high current applications, commonly found in the industrial applications.

The ASSR-15XX Series consists of an AlGaAs infrared light-emitting diode (LED) input stage optically coupled to a high-voltage output detector circuit. The detector consists of a high-speed photovoltaic diode array and driver circuitry to switch on/off two discrete high-voltage MOSFETs. The relay turns on (contact closes) with a minimum input current of 3 mA through the input LED. The relay turns off (contact opens) with an input voltage of 0.8V or less.

The single-channel configurations, ASSR-1510 and ASSR-1511, are equivalent to 1 Form A Electromechanical Relays (EMR), and the dual-channel configuration, ASSR-1520 and ASSR-1530, is equivalent to 2 Form A EMR. They are available in 4-pin SO, 6-pin DIP, 8-pin DIP and Gull Wing Surface Mount for DIP packages and true surface mount SO-8pin. Their electrical and switching characteristics are specified over the temperature range of –40°C to +85°C.

ASSR-1511 enables AC/DC and DC-only output connections. For DC-only connection, the output current, I_O, increases to 2A and the on-resistance, $R_{(ON)}$ reduces to 0.2Ω.

CAUTION! It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD.

Features

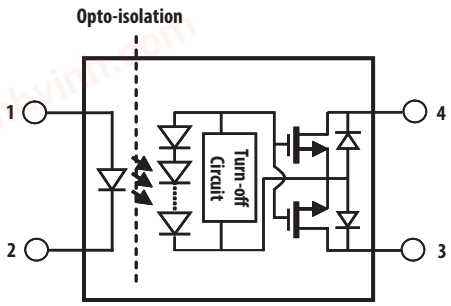

- Compact solid-state bidirectional signal switch
- Single and dual channel normally-off Single-Pole-Single-Throw (SPST) relay
- 60V output withstand voltage
- 1.0A or 2.0A current rating (See schematic for ASSR-1511 connections A and B.)
- Low input current: CMOS compatibility
- Low on-resistance: 0.12Ω typical for DC-only, 0.35Ω typical for AC/DC
- High speed switching: 0.25 ms (Ton), 0.02 ms (Toff) typical
- High transient immunity: >1 kV/µs
- High input-to-output insulation voltage (safety and regulatory approvals)
  - 3750 Vrms for 1 min per UL1577
  - CSA component acceptance

Applications

- Industrial controls
- Factory automation
- Data acquisition system
- Measuring instrument
- Medical system
- Security system
- EMR/Reed Relay replacement

Regulatory Information

The ASSR-1510, ASSR-1511, ASSR-1520 and ASSR-1530 are approved by the following organizations:

UL

Approved under UL 1577, component recognition program up to V_{ISO} = 3750 Vrms.

CSA

Approved under CSA Component Acceptance Notice #5.

Applications Information

On-Resistance and Derating Curves

The Output On-Resistance, $R_{(ON)}$, specified in this data sheet, is the resistance measured across the output contact when a pulsed current signal (I_O = 1A) is applied to the output pins. The use of a pulsed signal (≤30 ms) implies that each junction temperature is equal to the ambient and case temperatures. The steady-state resistance, Rss, on the other hand, is the value of the resistance measured across the output contact when a DC current signal is applied to the output pins for a duration sufficient to reach thermal equilibrium. Rss includes the effects of the temperature rise in the device.

Derating curves are shown in Figure 1, Figure 2, Figure 3, and Figure 4, specifying the maximum output current allowable for a given ambient temperature. The maximum allowable output current and power dissipation are related by the expression Rss = Po(max)/(Io(max))^2 from which Rss can be calculated. Staying within the safe area ensures that the steady-state MOSFET junction temperature remains less than 125°C.

Turn On Time and Turn Off Time Variation

The ASSR-15xx Series exhibits a very fast turn on and turn off time. Both the turn on and turn off time can be adjusted by choosing proper forward current as depicted in Figure 12 and Figure 14. The changes of the turn on and turn off time with ambient temperature are also shown in Figure 13 and Figure 15.
