ASSR-5211

High Current, 1 Form A, Solid State Relay (MOSFET) (600V/0.2A/16Ω)

AVAGO TECHNOLOGIES

Data Sheet

Lead (Pb) Free
RoHS 6 fully compliant

RoHS 6 fully compliant options available;
-xxxE denotes a lead-free product

Description

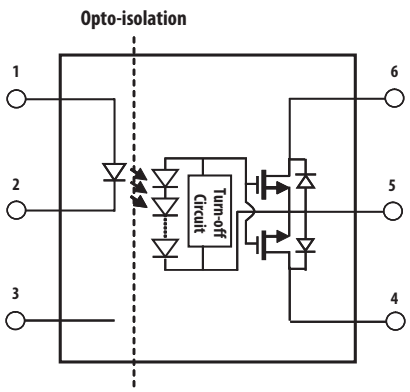

The ASSR-5211 is specifically designed for high current applications, commonly found in the industrial equipments. The relay is a solid-state replacement for single-pole, normally-open, (1 Form A) electromechanical relays.

The ASSR-5211 consists of an AlGaAs infrared light-emitting diode (LED) input stage optically coupled to a high-voltage output detector circuit. The detector consists of a high-speed photovoltaic diode array and driver circuitry to switch on/off two discrete high voltage MOSFETs. The relay turns on (contact closes) with a minimum input current of 3mA through the input LED. The relay turns off (contact opens) with an input voltage of 0.8V or less.

The ASSR-5211 connection A, as shown in the schematic, allows the relay to switch either ac or dc loads. The connection B, with its advantages of reduced on-resistance and higher output current, allows the relays to switch dc loads only.

The electrical and switching characteristics are specified over the temperature range of -40°C to +85°C.

Features

- Compact Solid-State Bi-directional Signal Switch
- Single Channel Normally-off Single-Pole-Single-Throw (SPST) Relay
- 600V Output Withstand Voltage
- 0.2A or 0.4A Current Rating
- Low Input Current: CMOS Compatibility
- Low On-Resistance:
  2.5Ω Typical for DC-only, 10Ω Typical for AC/DC
- High Speed Switching:
  0.7ms (Ton), 0.07ms (Toff) Typical @ I_F = 5mA
- High Transient Immunity: >1kV/µs
- High Input-to-Output Insulation Voltage
  (Safety and Regulatory Approvals Pending)
  - 3750 V_{RMS} for 1 min per UL1577
  - CSA Component Acceptance
  - *5000 V_{RMS}/1 Minute rating is for Option X21 only
    (Please consult your regional Avago representatives)

Applications

- Industrial Controls
- Factory Automation
- Data Acquisition
- Measuring Instrument
- Medical System
- Security System
- EMR / Reed Relay Replacement

CAUTION: It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD.

Regulatory Information

The ASSR-5211 is approved by the following organizations:

UL

Approved under UL 1577, component recognition program up to V_{ISO} = 3750 V_{RMS} and 5000 V_{RMS} (option x21).

Approved under CSA Component Acceptance Notice #5.

Notes:
1. For derating, refer to Figure 1 and 2.
2. The voltage across the output terminal of the relay should not exceed this rated withstand voltage. Over-voltage protection circuits should be added in some applications to protect against over-voltage transients.
3. Device is considered as a two terminal device: pins 1, 2, and 3 shorted together and pins 5, 6, and 7 shorted together.
4. The Input-Output Momentary Withstand Voltage is a dielectric voltage rating that should not be interpreted as an input-output continuous voltage rating. For the continuous voltage rating refer to the IEC/EN/DIN EN 60747-5-2 Insulation Characteristics Table (if applicable), your equipment level safety specification, or Avago Application Note 1074, "Optocoupler Input-Output Endurance Voltage."
5. During the pulsed $R_{(ON)}$ measurement (I_O duration ≤30ms), ambient (T_A) and case temperature (T_C) are equal.
6. For the transient rejection measurements, refer to Avago whitepaper, AV01-0610EN, "Solid State Relay Transient Immunity".
