HCPL-4562, HCNW4562

High Bandwidth, Analog/Video Optocouplers

AVAGO TECHNOLOGIES

Data Sheet

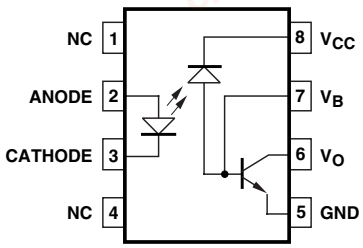

Lead (Pb) Free
RoHS 6 fully compliant

RoHS 6 fully compliant options available;
-xxxE denotes a lead-free product

Description

The HCPL-4562 and HCNW4562 optocouplers provide wide bandwidth isolation for analog signals. They are ideal for video isolation when combined with their application circuit (Figure 4). High linearity and low phase shift are achieved through an AlGaAs LED combined with a high speed detector. These single channel optocouplers are available in 8-Pin DIP and Widebody package configurations.

Functional Diagram

Features

- Wide bandwidth[1]:
  17 MHz (HCPL-4562)
  9 MHz (HCNW4562)
- High voltage gain[1]:
  2.0 (HCPL-4562)
  3.0 (HCNW4562)
- Low G_V temperature coefficient: -0.3%/°C
- Highly linear at low drive currents
- High-speed AlGaAs emitter
- Safety approval:
  UL Recognized
  – 3750 Vrms for 1 minute (5000 V rms for 1 minute for HCPL-4562#020 and HCNW4562) per UL 1577
  CSA Approved
  IEC/EN/DIN EN 60747-5-2 Approved
  – V_{IORM} = 1414 V_{peak} for HCNW4562
- Available in 8-pin DIP and widebody packages

Applications

- Video isolation for the following standards/formats: NTSC, PAL, SECAM, S-VHS, ANALOG RGB
- Low drive current feedback element in switching power supplies, e.g., for ISDN networks
- A/D converter signal isolation
- Analog signal ground isolation
- High voltage insulation

CAUTION: It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD.

Selection Guide

Single Channel Packages	
8-Pin DIP (300 Mil)	Widebody (400 Mil)
HCPL-4562	HCNW4562

Ordering Information

HCPL-4562 is UL Recognized with 3750 Vrms for 1 minute per UL1577 unless otherwise specified. HCNW4562 is UL Recognized with 5000 Vrms for 1 minute per UL1577.

Part Number	Option RoHS Compliant	Option non RoHS Compliant	Package	Surface Mount	Gull Wing	Tape & Reel	UL 5000 Vrms/ 1 Minute rating	IEC/EN/DIN EN 60747-5-2	Quantity
HCPL-4562	-000E	no option	300 mil DIP-8						50 per tube
	-300E	#300		X	X				50 per tube
	-500E	#500		X	X	X			1000 per reel
	-020E	#020					X		50 per tube
	-320E	#320		X	X		X		50 per tube
	-520E	#520		X	X	X	X		1000 per reel
	-060E	#060						X[1]	50 per tube
HCNW4562	-000E	no option	400 mil Widebody DIP-8				X	X[2]	42 per tube
	-300E	#300		X	X		X	X[2]	42 per tube
	-500E	#500		X	X	X	X	X[2]	750 per reel

Notes:
1. IEC/EN/DIN EN 60747-5-2 V_{IORM} = 630 V_{peak} Safety Approval.
2. IEC/EN/DIN EN 60747-5-2 V_{IORM} = 1414 V_{peak} Safety Approval.

To order, choose a part number from the part number column and combine with the desired option from the option column to form an order entry.

Example 1:

HCPL-4562-520E to order product of Gull Wing Surface Mount package in Tape and Reel packaging with UL 5000 Vrms/1 minute rating and RoHS compliant.

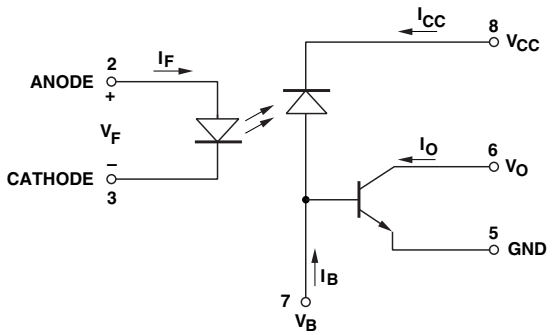

Example 2:

HCNW4562 to order product of 8-Pin Widebody DIP package in Tube packaging with IEC/EN/DIN EN 60747-5-2 V_{IORM} = 1414 V_{peak} Safety Approval and UL 5000 Vrms/1 minute rating and non RoHS compliant.

Option datasheets are available. Contact your Avago sales representative or authorized distributor for information.

Remarks: The notation '#XXX' is used for existing products, while (new) products launched since July 15, 2001 and RoHS compliant will use '–XXXE.'

Solder Reflow Temperature Profile

Note: Non-halide flux should be used.

Recommended Pb-Free IR Profile

NOTES:
THE TIME FROM 25 °C to PEAK TEMPERATURE = 8 MINUTES MAX.
T_{smax} = 200 °C, T_{smin} = 150 °C

Note: Non-halide flux should be used.
* Recommended peak temperature for widebody 400 mils package is 245°C

Regulatory Information

The devices contained in this data sheet have been approved by the following organizations:

UL

Recognized under UL 1577, Component Recognition Program, File E55361.

CSA

Approved under CSA Component Acceptance Notice #5, File CA 88324.

IEC/EN/DIN EN 60747-5-2

Approved under:
IEC 60747-5-2:1997 + A1:2002
EN 60747-5-2:2001 + A1:2002
DIN EN 60747-5-2 (VDE 0884 Teil 2):2003-01
(HCNW4562 only)

Input-Output Capacitance	C_{I-O}	HCPL-4562		0.6		pF	f = 1 MHz		5
		HCNW4562		0.5	0.6				

*The Input-Output Momentary Withstand Voltage is a dielectric voltage rating that should not be interpreted as an input-output continuous voltage rating. For the continuous voltage rating refer to the VDE 0884 Insulation Related Characteristics Table (if applicable), your equipment level safety specification or Avago Application Note 1074 entitled "Optocoupler Input-Output Endurance Voltage," publication number 5963-2203E.

Notes:

1. When used in the circuit of Figure 1 or Figure 4; $G_V = V_{OUT}/V_{IN}$; $I_{FQ} = 6$ mA (HCPL-4562), $I_{FQ} = 10$ mA (HCNW4562).
2. Derate linearly above 70°C free-air temperature at a rate of 2.0 mW/°C (HCPL-4562).
3. Maximum variation from the best fit line of I_{PB} vs. I_F expressed as a percentage of the peak-to-peak full scale output.
4. CURRENT TRANSFER RATIO (CTR) is defined as the ratio of output collector current, I_O, to the forward LED input current, I_F, times 100%.
5. Device considered a two-terminal device: Pins 1, 2, 3, and 4 shorted together and Pins 5, 6, 7, and 8 shorted together.
6. Flat-band, small-signal voltage gain.
7. The frequency at which the gain is 3 dB below the flat-band gain.
8. Differential gain is the change in the small-signal gain of the optocoupler at 3.58 MHz as the bias level is varied over a given range.
9. Differential phase is the change in the small-signal phase response of the optocoupler at 3.58 MHz as the bias level is varied over a given range.
10. TOTAL HARMONIC DISTORTION (THD) is defined as the square root of the sum of the square of each harmonic distortion component. The THD of the isolated video circuit is measured using a 2.6 kΩ load in series with the 50 Ω input impedance of the spectrum analyzer.
11. ISOLATION MODE REJECTION RATIO (IMRR), a measure of the optocoupler's ability to reject signals or noise that may exist between input and output terminals, is defined by $20 \log_{10} [(V_{OUT}/V_{IN})/(V_{OUT}/V_{IM})]$, where V_{IM} is the isolation mode voltage signal.
12. In accordance with UL 1577, each optocoupler is proof tested by applying an insulation test voltage ≥4500 V rms for 1 second (leakage detection current limit, $I_{I-O} \leq 5$ μA). This test is performed before the 100% Production test shown in the IEC/EN/DIN EN 60747-5-2 Insulation Related Characteristics Table, if applicable.
13. In accordance with UL 1577, each optocoupler is proof tested by applying an insulation test voltage ≥6000 V rms for 1 second (leakage detection current limit, $I_{I-O} \leq 5$ μA). This test is performed before the 100% Production test shown in the IEC/EN/DIN EN 60747-5-2 Insulation Related Characteristics Table, if applicable.

Conversion from HCPL-4562 to HCNW4562

In order to obtain similar circuit performance when converting from the HCPL-4562 to the HCNW4562, it is recommended to increase the Quiescent Input Current, I_{FQ}, from 6 mA to 10 mA. If the application circuit in Figure 4 is used, then potentiometer R4 should be adjusted appropriately.

Design Considerations of the Application Circuit

The application circuit in Figure 4 incorporates several features that help maximize the bandwidth performance of the HCPL-4562/HCNW4562. Most important of these features is peaked response of the detector circuit that helps extend the frequency range over which the voltage gain is relatively constant. The number of gain stages, the overall circuit topology, and the choice of DC bias points are all consequences of the desire to maximize bandwidth performance.

To use the circuit, first select R_1 to set V_E for the desired LED quiescent current by:

$$I_{FQ} = \frac{V_E}{R_4} \approx \frac{G_V V_E R_{10}}{(I_{PB}/I_F) R_7 R_9} \quad (1)$$

For a constant value V_{INp-p}, the circuit topology (adjusting the gain with R_4) preserves linearity by keeping the modulation factor (MF) dependent only on V_E.

$$i_{Fp-p} \approx V_{IN}/R_4 \quad (2)$$

$$\frac{i_{Fp-p}}{I_{FQ}} \approx \frac{i_{PBp-p}}{I_{PBQ}} = \frac{V_{INp-p}}{V_E} \quad (3)$$

Modulation

$$\text{Factor (MF):} \frac{i_{F(p-p)}}{2 I_{FQ}} = \frac{V_{INp-p}}{2 V_E} \quad (4)$$

For a given G_V, V_E, and V_{CC}, DC output voltage will vary only with h_{FEX}.

$$V_O = V_{CC} - V_{BE_4} - \frac{R_9}{R_{10}}[V_{BEX} - (I_{PBQ} - I_{BXQ}) R_7] \quad (5)$$

Where:

$$I_{PBQ} \approx \frac{G_V V_E R_{10}}{R_7 R_9} \quad (6)$$

and,

$$I_{BXQ} \approx \frac{V_{CC} - 2 V_{BE}}{R_6 h_{FEX}} \quad (7)$$

Figure 15 shows the dependency of the DC output voltage on h_{FEX}.

For 9 V < V_{CC} < 12 V, select the value of R_{11} such that

$$I_{CQ4} \approx \frac{V_O}{R_{11}} \quad \frac{4.25\ V}{470} \quad 9.0\ mA \quad (8)$$

The voltage gain of the second stage (Q_3) is approximately equal to:

$$\frac{R_9}{R_{10}} * \frac{1}{1 + s R_9 \left[C_{CQ_3} + \frac{1}{2 R_{11} f_{T_4}}\right]} \quad (9)$$

Increasing R'_{11} (R'_{11} includes the parallel combination of R_{11} and the load impedance) or reducing R_9 (keeping R_9/R_{10} ratio constant) will improve the bandwidth.

If it is necessary to drive a low impedance load, bandwidth may also be preserved by adding an additional emitter following the buffer stage (Q_5 in Figure 16), in which case R_{11} can be increased to set $I_{CQ4} \cong 2$ mA.

Finally, adjust R_4 to achieve the desired voltage gain.

$$G_V \approx \frac{V_{OUT}}{V_{IN}} \approx \frac{I_{PB}}{I_F}\left[\frac{R_7 R_9}{R_4 R_{10}}\right] \quad (10)$$

where typically $\frac{I_{PB}}{I_F} = 0.0032$

Definition:

G_V = Voltage Gain

I_{FQ} = Quiescent LED forward current

i_{Fp-p} = Peak-to-peak small signal LED forward current

V_{INp-p} = Peak-to-peak small signal input voltage

i_{PBp-p} = Peak-to-peak small signal base photo current

I_{PBQ} = Quiescent base photo current

V_{BEX} = Base-Emitter voltage of HCPL-4562/ HCNW4562 transistor

I_{BXQ} = Quiescent base current of HCPL-4562/ HCNW4562 transistor

h_{FEX} = Current Gain (I_C/I_B) of HCPL-4562/ HCNW4562 transistor

V_E = Voltage across emitter degeneration resistor R_4

f_{T4} = Unity gain frequency of Q_5

C_{CQ3} = Effective capacitance from collector of Q_3 to ground
