1. The melt point temperature is a typical value and may vary somewhat due to molecular distribution. If the melting point is critical to your application, then several lots should be thoroughly evaluated.
2. Due to different rates of cooling, this test method may yield pour points lower than the temperature at which these fluids would melt.
3. Fedors Method: R.F. Fedors, *Polymer Engineering and Science*, Feb. 1974.

Description

XIAMETER™ PMX-200 Silicone Fluid is a polydimethylsiloxane fluid commonly used as a base fluid in personal care products due to its excellent spreading characteristics. It is clear, tasteless, essentially odorless and non-greasy.

Commercial bulk-polymerized dimethyl silicone fluids, such as XIAMETER PMX-200 Silicone Fluids, typically contain trace amounts of impurities.

How To Use

XIAMETER PMX-200 Silicone Fluid may be used alone or blended with other cosmetic fluids to provide a fluid base for a variety of cosmetic ingredients. It feature good solubility in most anhydrous alcohols and in many solvents used in cosmetics.

Handling Precautions

XIAMETER PMX-200 Silicone Fluid may cause temporary eye discomfort.

Use caution when handling volatile fluids at temperatures with 10°C of the quoted flash point.

At elevated temperatures, XIAMETER PMX-200 Silicone Fluids are sensitive to contamination by strong acids, bases, some metallic compounds and oxidizing agents. These contaminants may cause an accelerated rate of volatile byproduct formation. Oxidizing agents can also cause an increase in fluid viscosity. When these conditions may exist, it is recommended that the flash point of the fluids be checked periodically to monitor operational safety. Also, ignitable conditions may exist if the fluid is giving off smoke.
