FSA3230 — High-Speed USB2.0 / Mobile High-Definition Link (MHL™) with Negative Swing Audio

Features

- Low On Capacitance: 6 pF / 6 pF MHL / USB (Typical)
- Low Power Consumption: 30 µA Maximum
- Supports MHL Rev. 2.0
- MHL Data Rate: 4.0 Gbps
- Audio Swing: -1.5 V to +1.5 V (Typical)
- V_{BUS} Powers Device with No V_{CC}
- Packaged in 16-Lead UMLP (1.8 x 2.6 mm)
- Over-Voltage Tolerance (OVT) on all USB Ports, Up to 5.25 V without External Components

Applications

- Cell Phones and Digital Cameras

Description

The FSA3230 is a bi-directional, low-power, high-speed, 3:1, USB2.0, MHL™ and audio switch. Configured as a double-pole, triple-throw (DP3T) switch, it is optimized for switching between high- or full-speed USB, Mobile High-Definition Link sources (per MHL Rev. 2.0 specification) and negative swing capable audio. A Single-Pole, Double-Throw (SPDT) switch is provided for ID. This ID switch provides path to support On-The-Go (OTG) communication for the USB Path OR CBUS for the MHL Path.

The FSA3230 contains special circuitry on the switch I/O pins, for applications where the V_{CC} supply is powered off (V_{CC}=0), that allows the device to withstand an over-voltage condition. This switch is designed to minimize current consumption even when the control voltage applied to the control pins is lower than the supply voltage (V_{CC}). This is especially valuable in mobile applications, such as cell phones; allowing direct interface with the general-purpose I/Os of the baseband processor. Other applications include switching and connector sharing in portable cell phones, digital cameras, and notebook computers.

Ordering Information

Part Number	Top Mark	Operating Temperature Range	Package
FSA3230UMX	LK	-40 to +85°C	16-Lead, Ultrathin Molded Leadless Package (UMLP), 1.8 x 2.6 mm

FSA3230 — High-Speed USB2.0 Switch/Mobile High-Definition Link (MHL™) Switch with Negative Swing Audio

Analog Symbol

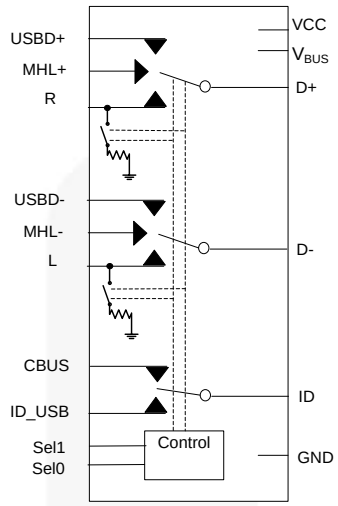

Figure 1. Analog Symbol

Table 1. Data Switch Select Truth Table

SEL1(1)	SEL0(1)	Shunt	Function
0	0	Enable	D+/D- connected to USB+/USB-; ID connected to ID_USB
0	1	Disable	D+/D- connected to R/L; ID connected to ID_USB
1	0	Enable	D+/D- connected to MHL+/MHL; ID connected to CBUS
1	1	Enable	D+/D- high impedance; ID Hi-Z

Note:

1. Control inputs should never be left floating or unconnected. To guarantee default switch closure to the USB position, the SEL[0:1] pins should be tied to GND with a weak pull-down resistor (3 MΩ) to minimize static current draw.

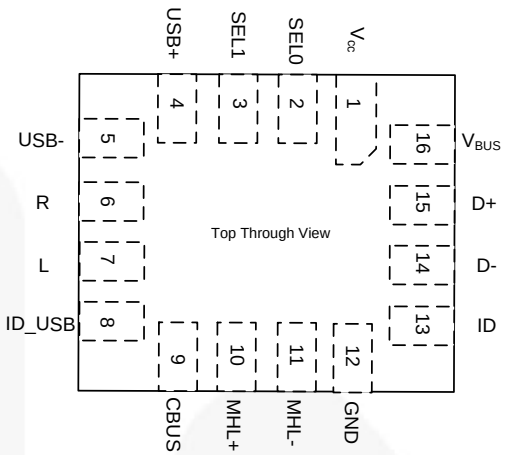

Figure 3. Top Through View

Pin Definitions

Pin	Name	Description
1	V_{CC}	V_{CC} Supply
2	SEL0	Control Pin
3	SEL1	Control Pin
4	USB+	USB Differential Data (Positive)
5	USB-	USB Differential Data (Negative)
6	R	Audio R (Negative Swing)
7	L	Audio L (Negative Swing)
8	ID_USB	ID for USB Host
9	CBUS	CBUS for MHL Host
10	MHL+	MHL Differential Data (Positive)
11	MHL-	MHL Differential Data (Negative)
12	GND	Ground
13	ID	Common Data Path for ID
14	D-	Common Data Path D-
15	D+	Common Data Path D+
16	V_{BUS}	V_{BUS} Pin from Micro-USB Connector

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter		Min.	Max.	Unit
V_{CC}, V_{BUS}	Supply Voltage		-0.5	6.0	V
V_{CNTRL}	DC Input Voltage (SEL[1:0])(2)		-0.5	V_{CC}	V
V_{SW}	DC Switch I/O Voltage(2)	USB	-0.5	6.0	V
		MHL	-0.5	6.0	
		AUDIO	-2.0	3	
		ID	-0.5	6.0	V
I_{IK}	DC Input Diode Current		-50		mA
I_{OUT}	Switch DC Output Current (Continuous)	USB		60	mA
		MHL		60	mA
		AUDIO		60	mA
$I_{OUTPEAK}$	Switch DC Output Peak Current (Pulsed at 1ms Duration, <10% Duty Cycle)	USB		150	mA
		MHL		150	mA
		AUDIO		150	mA
T_{STG}	Storage Temperature		-65	+150	°C
MSL	Moisture Sensitivity Level: JEDEC J-STD-020A			1	
ESD	Human Body Model, JEDEC: JESD22-A114	All Pins		3.5	kV
	IEC 61000-4-2, Level 4, for D+/D- and V_{CC} Pins(3)	Contact		8	
	IEC 61000-4-2, Level 4, for D+/D- and V_{CC} Pins(3)	Air		15	
	Charged Device Model, JESD22-C101			2	

Notes:

2. The input and output negative ratings may be exceeded if the input and output diode current ratings are observed. V_{SW} refers to analog data switch paths (USB, MHL, and audio).
3. Testing performed in a system environment using TVS diodes.

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Symbol	Parameter	Min.	Max.	Unit
V_{BUS}	Supply Voltage Running from V_{BUS} Voltage	4.2	5.25	V
V_{CC}	Supply Voltage Running from V_{CC}	2.5	4.5	V
$t_{RAMP(VBUS)}$	Power Supply Slew Rate from V_{BUS}	100	1000	µs/V
$t_{RAMP(VCC)}$	Power Supply Slew Rate from V_{CC}	100	1000	µs/V
Θ_{JA}	Thermal Resistance, Junction to Ambient		283	C°/W
Θ_{JC}	Thermal Resistance, Junction to Case		145	C°/W
V_{CNTRL}	Control Input Voltage (SEL[1:0])(4)	0	4.5	V
$V_{SW(USB)}$	Switch I/O Voltage (USB and ID Switch Path)	-0.5	3.6	V
$V_{SW(MHL)}$	Switch I/O Voltage (MHL Switch Path)	1.65	3.45	V
$V_{SW(AUD)}$	Switch I/O Voltage (Audio Switch Path)	-1.5	3.0	V
T_A	Operating Temperature	-40	+85	°C

Note:

4. The control inputs must be held HIGH or LOW; they must not float.

DC Electrical Characteristics

All typical value are at T_A=25°C unless otherwise specified.

Symbol	Parameter	Condition	V_{CC} (V)	T_A=- 40°C to +85°C			Unit

Functional Description

Insertion Loss

One of the key factors for using the FSA3230 in mobile digital video applications is the small amount of insertion loss experienced by the received signal as it passes through the switch. This results in minimal degradation of the received eye. One of the ways to measure the quality of the high data rate channels is using balanced ports and four-port differential S-parameter analysis, particularly SDD21.

Bandwidth is measured using the S-parameter SDD21 methodology.

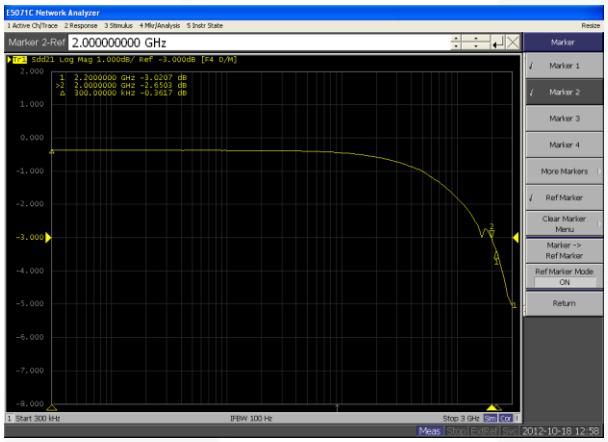

Figure 16. MHL Path SDD21 Insertion Loss Curve

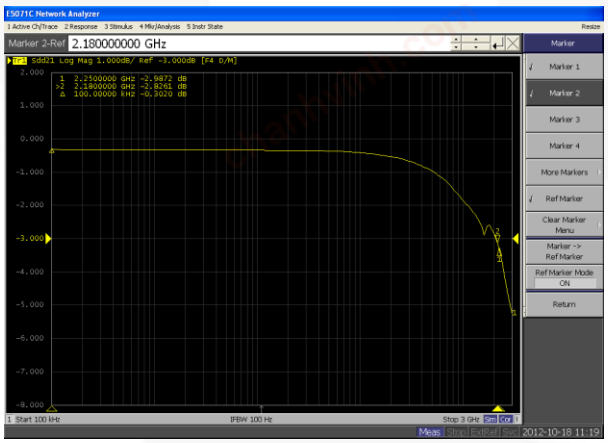

Figure 17. USB Path SDD21 Insertion Loss Curve

Typical Applications

Figure 18 shows the FSA3230 utilizing the V_{BUS} from the micro-USB connection. The 3 MΩ resistors are used to ensure, for manufacturing test via the micro-USB connector, that the FSA3230 configures for connectivity to the baseband or application processor. Figure 19 shows the configuration for the the FSA3230 "self powered" by battery only.

Switch Power Operation

In normal operation, the FSA3230 is powered from the V_{CC} pin, which typically is derived from a regulated power management device. In special circumstances, such as production test or system firmware upgrade, the device can be powered from the V_{BUS} pin. If both V_{CC} and V_{BUS} pins are present, V_{CC} is selected as the power source and V_{BUS} is ignored (*see Table 2*).

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. TO OBTAIN THE LATEST, MOST UP-TO-DATE DATASHEET AND PRODUCT INFORMATION, VISIT OUR WEBSITE AT HTTP://WWW.FAIRCHILDSEMI.COM. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

PRODUCT STATUS DEFINITIONS

Definition of Terms

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
No Identification Needed	Full Production	Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.
