# SMT Power Inductors

*Power Beads - PGL6380.XXXHLT Series*

Pulse a YAGEO company

- **Current Rating:** *Over 117A peak*
- **Inductance Range:** *100nh to 200nH*
- **Height:** *11.15mm Max*
- **Footprint:** *12.0mm x 6.0mm Max*

**Electrical Specifications @ 25°C — Operating Temperature - 40°C to +125°C**

| Part Number | Inductance[1] @ 0ADC (nH +/- 15%) | Inductance[2] @ I sat (nH MIN) | Irated[3] (A) | DCR (1-4) mohm (+/- 10%) | DCR (2-3) MAX (+/- 10%) | Saturation Current[5] (A TYP) | | Heating Current (1-4) A TYP | Heating Current (2-3) A TYP | HiPot (1-2) (Vdc) |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | 25°C | 100°C | | | |
| PGL6380.101HLT | 100 | 70 | 77 | 0.125 | 0.37 | 117 | 100 | 77 | 45 | 100Vdc |
| PGL6380.121HLT | 120 | 84 | 77 | | | 102 | 87 | | | |
| PGL6380.151HLT | 150 | 105 | 77 | | | 85 | 75 | | | |
| PGL6380.171HLT | 170 | 119 | 70 | | | 70 | 60 | | | |
| PGL6380.201HLT | 200 | 140 | 59 | | | 59 | 50 | | | |

**NOTES:**

1. Inductance measured at 100kHz, 1.0mVrms.
2. Inductance at Irated is the value of the inductance at 25°C at the listed rated current.
3. Rated Current is the DC current which causes the part temperature to increase by approximately 40C. It is a calculated value and will vary within application based on ambient temperature, air flow, surrounding component temperature and heat sinking. Part temperature should not exceed 125C under worst case operating conditions. Part temperature should be verified in the end application.
4. The nominal DCR is measured at point 2., as shown below on the mechanical drawing.
5. The saturation current is the typical current which causes the inductance to drop by 20% at the stated ambient temperatures (25°C, 100°C ). This current is determined by placing the component in the specified ambient environment and applying a short duration pulse current (to eliminate self-heating effects) to the component.
6. In high volt*time applications, additional heating in the component can occur due to core losses in the inductor which may neccessitate derating the current in order to limit the temperature rise of the component. To determine the approximate total losses (or temperature rise) for a given application, the coreless and temperature rise curves can be used.In high volt*time applications, additional heating in the component can occur due to core losses in the inductor which may neccessitate derating the current in order to limit the temperature rise of the component. To determine the approximate total losses (or temperature rise) for a given application, the coreless and temperature rise curves can be used.
7. Parts with the HLT suffix are sold in tape and reel packaging. Pulse complies to industry standard tape and reel specification EIA-481.
   The tape and reel for this product has a width (W=24mm), pitch (Po=12mm) and depth (Ko=12.2mm). Samples of these parts can be ordered by removing the HLT suffix and replacing with HL.
8. The temperature of the component (ambient plus temperature rise) must be within the stated operating temperature range.
9. Sample Value only. Guaranteed by Design and not tested in production
10. HiPot: (1-4) to (2-3), 100Vdc, 1.0mA, 2sec
