3-Port Solenoid Valve

VQ100 Series

[Option]

Unprecedented high speed, with stable response times

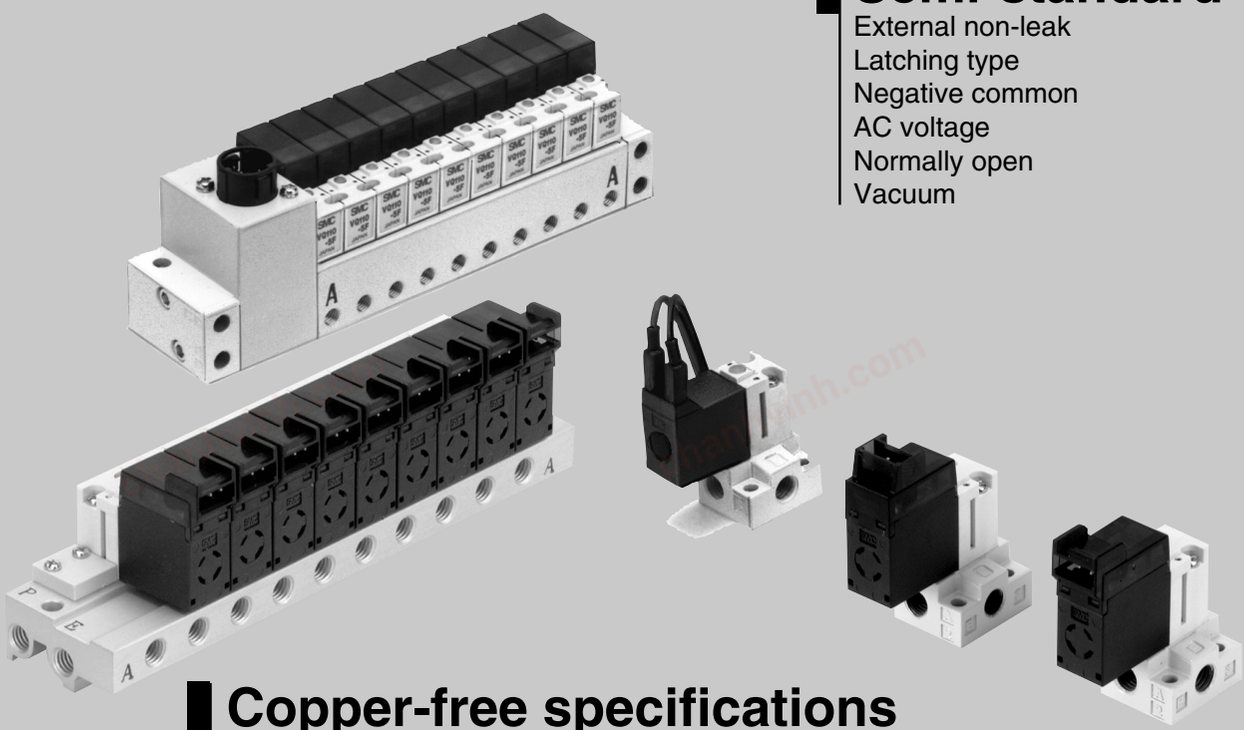

ON: 3.5 ms, OFF: 2 ms, Dispersion accuracy ±1 ms
(With light/surge voltage suppressor; supply pressure 0.5 MPa)

Compact with large flow capacity.

Body width 9.8 mm C: 0.055 dm³/(s·bar) (Standard, high-pressure type)
C: 0.14 dm³/(s·bar) (Large flow capacity type)
: Semi-standard

Semi-standard

External non-leak
Latching type
Negative common
AC voltage
Normally open
Vacuum

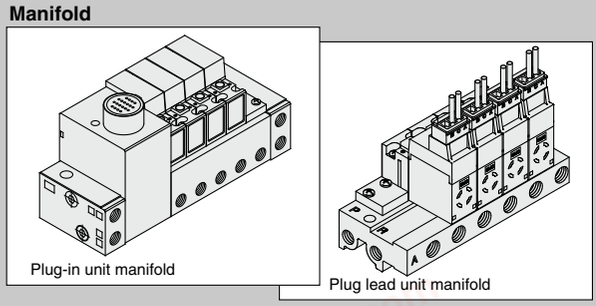

Copper-free specifications

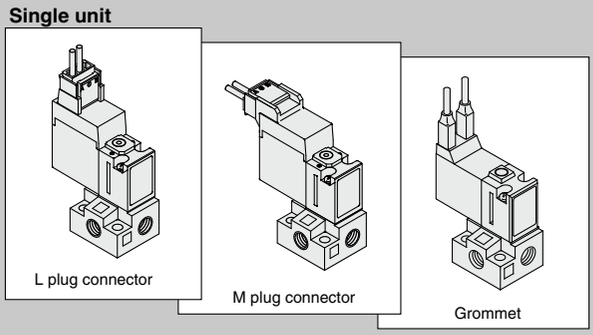

The fluid contacting section is copper-free and the standard type can be used as it is.

A wide variation of wiring

Item				Standard (1 W)	High-pressure (1.5 W)	Low wattage (0.5 W)
Valve specifications	Valve structure			3-port direct operated poppet		
	Fluid			Air		
	Max. operating pressure			0.7 MPa	0.8 MPa	0.7 MPa
	Min. operating pressure (Vacuum)			0 MPa (–0.1 MPa[*5])		
	Flow rate characteristics	1 → 2	C [dm³/(s·bar)]	0.055		0.042
			b	0.22		0.27
			Cv	0.014		0.011
		2 → 3	C [dm³/(s·bar)]	0.083		0.045
			b	0.28		0.28
			Cv	0.021		0.012
	Response time[*1]			ON: 3.5 ms, OFF: 2 ms		ON: 3.5 ms, OFF: 2.5 ms
	Ambient and fluid temperatures			–10 to 50°C[*2]		
	Lubrication			Not required		
	Manual override			Non-locking push type/Locking type (Tool required)[*3]		
	Mounting operation			Free		
	Impact/Vibration resistance[*4]			150/30 m/s²		
	Enclosure			Dust-tight		
	Weight			12.6 g (L/M plug connector, Without sub-plate)		
Electrical specifications	Coil rated voltage		DC	24 V, 12 V		
	Allowable voltage fluctuation			±10% of rated voltage		
	Coil insulation type			Equivalent to class B		
	Power consumption (Current)		DC	1 W (42 mA)	1.5 W (63 mA)	0.5 W (21 mA)
	Electrical entry			Grommet Plug-in, L plug connector, M plug connector (With light/surge voltage suppressor)		

∗1 Based on JIS B 8374-1993. With light/surge voltage suppressor (clean air), Dispersion accuracy ±1 ms
∗2 Use dry air to prevent condensation when operating at low temperatures.
∗3 Locking type: Semi-standard
∗4 Impact resistance: No malfunction when tested with a drop tester in the axial direction and at a right angle to the armature, one time each in energized and deenergized states. Vibration resistance: No malfunction when tested with one sweep of 45 to 2000 Hz in the axial direction and at a right angle to the armature, in both energized and deenergized states. (Value in the initial stage)
∗5 For vacuum, please use the 10- clean series. The 3(R) port can be used for vacuum, and the 1(P) port can be used for vacuum release pressure. (For the differential pressure between the 3(R) port and the 1(P) port, use within the max. operating pressure of each type.)
∗ For the power-saving type electrical entry, plug-in, L, or M plug connectors are applicable.

Specific Product Precautions 1

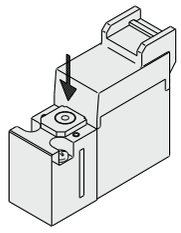

Be sure to read this before handling the products.
Refer to the "Handling Precautions for SMC Products" (M-E03-3) for safety instructions and solenoid valve precautions.

⚠ Warning

Manual Override

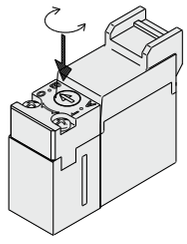

Connected actuator is started by manual operation. Use the manual override after confirming that there is no danger.

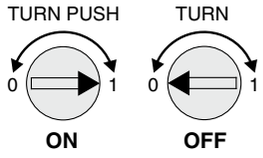

■ Non-locking push type (Tool required)

· It is turned ON by pushing the button in the direction indicated by the arrow until it hits the end and turned OFF by releasing the button.

■ Locking type (Tool required) <Semi-standard>

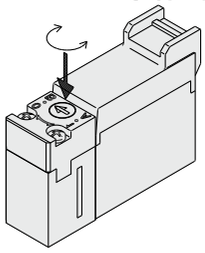

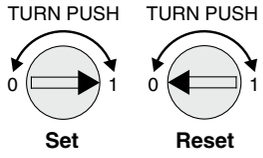

· It can be locked in the ON state by turning the manual override to the right, setting the ▶ mark to 1 and pushing it.
· It can be unlocked by turning the manual override to the left, setting the ◀ mark to 0 and pushing it, and the manual returns.

* Make sure the locking type manual override is unlocked before use.

■ Push-locking type (Tool required) <Latching type>

· It can be locked in the set state (flow: P → A) by turning the manual override to the right, setting the ▶ mark to 1 and pushing it.
· It can be turned back to the reset state (flow: A → R) by turning the manual override to the left, setting the ◀ mark to 0 and pushing it. (It is set in reset state when shipped.)

⚠ Caution When operating the locking type manual override with a screwdriver, turn it gently using a watchmakers screw driver.
[Torque: Less than 0.1 N·m]
For the locking type, be sure to completely turn the manual override before pressing it. (Pressing the manual override while turning it will damage the manual override button.)

Mounting

To mount the valve, check the condition of the body interface gasket and then tighten it uniformly to the appropriate tightening torque (0.15 to 0.18 N·m).

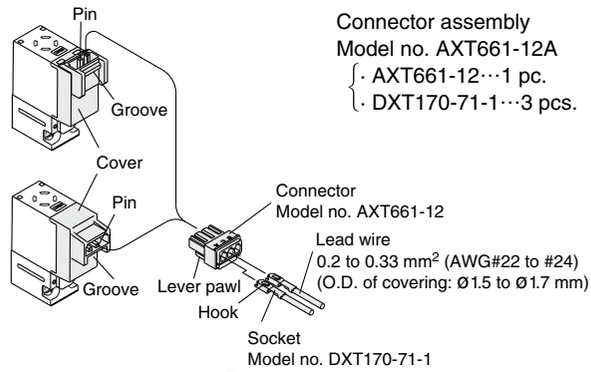

⚠ Caution

How to Use Plug Connector

Attaching and detaching connectors

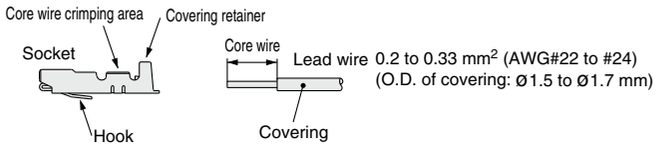

- To attach a connector, hold the lever and connector unit between your fingers and insert straight onto the pins of the solenoid valve so that the lever's pawl is pushed into the groove and locks.
- To detach a connector, remove the pawl from the groove by pushing the lever downward with your thumb, and pull the connector straight out.

* Gently pull the lead wire, otherwise it may cause contact failure or disconnection.

Crimping connection of lead wire and socket

Strip 3.2 to 3.7 mm at the end of lead wires, insert the end of the core wires evenly into the sockets, and then crimp it by a crimping tool. When this is done, take care that the coverings of the lead wires do not enter the core wire crimping area.
(Crimping tool: Model no. DXT170-75-1)

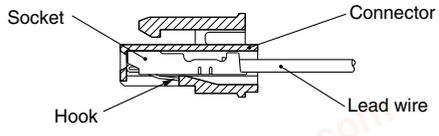

Attaching and detaching lead wires with sockets

- Attaching

  Insert the sockets into the square holes of the connector (A, C, B indication), and continue to push the sockets all the way in until they lock by hooking into the seats in the connector. (When they are pushed in, their hooks open and they are locked automatically.) Then confirm that they are locked by pulling lightly on the lead wires.

- Detaching

  To detach a socket from a connector, pull out the lead wire while pressing the socket's hook with a stick having a thin tip (approx. 1 mm). If the socket will be used again, first spread the hook outward.

Refer to the "Handling Precautions for SMC Products" (M-E03-3) for safety instructions and solenoid valve precautions.

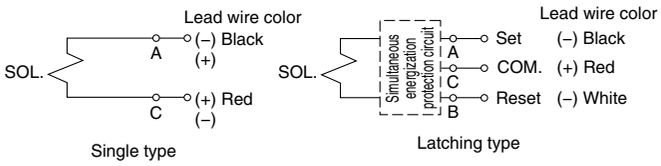

⚠ Caution

How to Use Plug Connector

Wiring Specifications

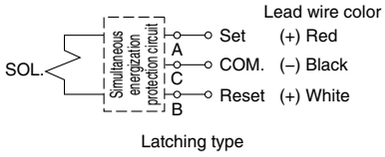

●Wiring should be connected as shown below. Connect with the power supply respectively.

DC positive common

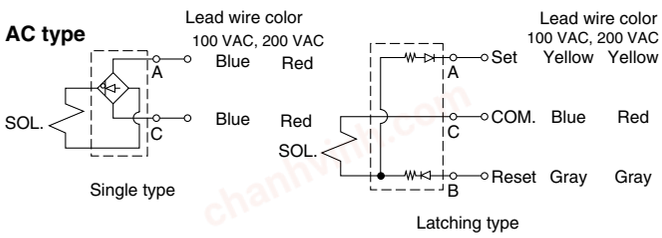

DC negative common

There is no polarity for the single type.
∗ However, there is polarity for the large flow type.

AC type

●How to Order valve plug connector assembly

DC positive common
- **Single type**
  AXT661-14A-
- **Latching type**
  AXT661-13A-

DC negative common
- **Latching type**
  AXT661-13AN-

For 100 VAC
- **Single type**
  AXT661-31A-
- **Latching type**
  AXT661-32A-

For 200 VAC
- **Single type**
  AXT661-34A-
- **Latching type**
  AXT661-35A-

Connector/Socket only (3 pcs.)
AXT661-12A

Lead wire length

Nil	300 mm
6	600 mm
10	1000 mm
20	2000 mm
30	3000 mm

●Plug connector lead wire length

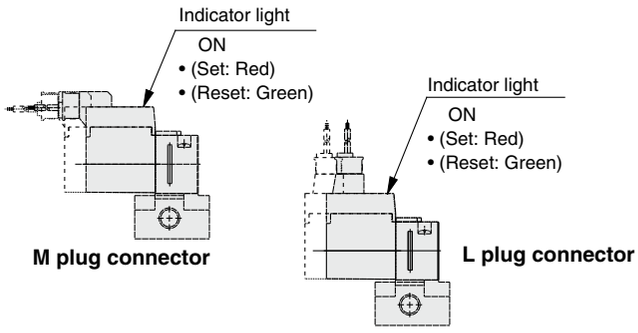

The lead wire length of the valves with lead wire is 300 mm. When ordering a lead wire length of 600 mm or longer, list the part numbers for the valve without connector and the connector assembly.

⚠ Caution

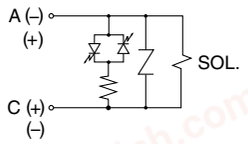

Light/Surge Voltage Suppressor

In the latching type, the set side and the reset side energization are indicated by two colors – red and green.

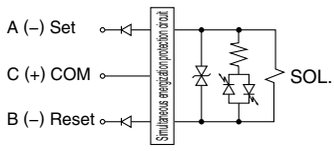

∗ ( ) and the dotted lines indicate the latching and large flow type.

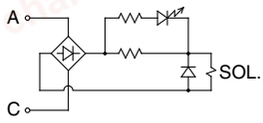

Single solenoid (DC)

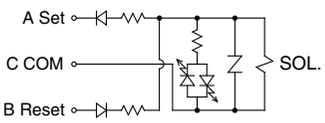

Latching solenoid (DC)

Single solenoid (AC)

Latching solenoid (AC)

∗ Single: No polarity
ON: Red light lights.
∗ Setting side energizing: Red light lights.
Resetting side energizing: Green light lights.
With wrong wiring prevention (stop diode) mechanism
With surge voltage suppresser (ZNR/Surge absorbing diode)

∗ A (set) side energizing: P → A
B (set) side energizing: A → R
∗ Negative common specification is applicable.

Specific Product Precautions 3

Be sure to read this before handling the products.
Refer to the "Handling Precautions for SMC Products" (M-E03-3) for safety instructions and solenoid valve precautions.

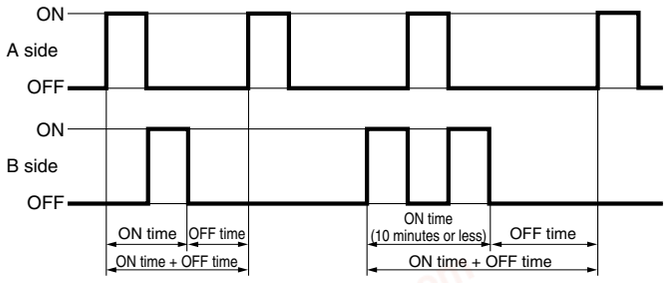

⚠ Caution

Latching Type

The latching solenoid is equipped with a self-holding mechanism which permits the movable iron core in the solenoid to hold the set position or reset position during momentary energization (20 ms or longer), so there is no need for continuous energization. Depending on conditions, continuous energization may cause a rise in the coil temperatures, resulting in a malfunction.

<Special precautions to be taken with the latching type>

1. Do not continuously energize the latching type.
   When it is necessary to energize it continuously, keep the energized period to 10 minutes or less, and then leave a de-energized period (on both the A side and B side) lasting longer than the energized period, before operating it again. The duty ratio should be 50% or less.

· Maximum ON time is 10 minutes.
· Duty ratio ≤ 50% (Duty ratio = $\frac{\text{ON time}}{\text{ON time + OFF time}}$)

Example: When energization lasts for five minutes, it should be followed by five or more minutes of de-energization. Because the latching type has only one solenoid, both the A side and B side should be off for five minutes or more.

However, a minimum energization time of 20 ms is recommended.
[Ambient temperature]
The product should be installed in an environment with an ambient temperature of –10°C to 50°C. Especially in environments with poor heat dissipation, such as in a panel, the heat of the coil can cause the ambient temperature to rise, so please exercise caution.

2. Use a circuit in which the set and reset signals will not be energized at the same time.
3. The minimum energization time for self-holding is 20 ms.
4. Even when there is no problem with normal operations and locations, please consult with SMC before using in locations with a vibration of 30 m/s^2 or more or a strong magnetic field.
5. Even though this valve is set to the reset position at the time of shipment (passage: A → R), it may switch to the set position during transportation or due to impact when mounting valves, etc. Therefore, check the initial position with the power supply or by performing a manual override prior to use.

Latching	Passage	Indicator light
A-C ON (set)	P → A	Red
B-C ON (reset)	A → R	Green

Single	Passage	Indicator light
A-C ON	P → A	Red
OFF	A → R	—

⚠ Caution

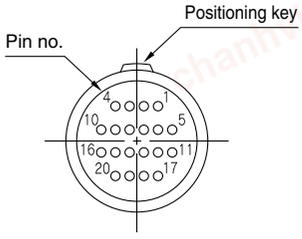

How to Use of Circular Connector (For plug-in manifold: For VV3Q11)

1. Attaching and detaching connectors

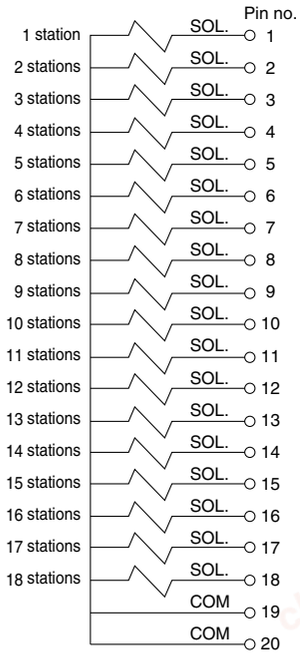

- To attach a connector, align the positioning key grooves of the body to the key, and it is locked.
- To detach the connector, pull the ring section straight back, and it is unlocked and then take it off.

2. Wiring Specifications

Circular connector pin arrangement

⚠ Caution

How to Connect/Disconnect DIN Rail

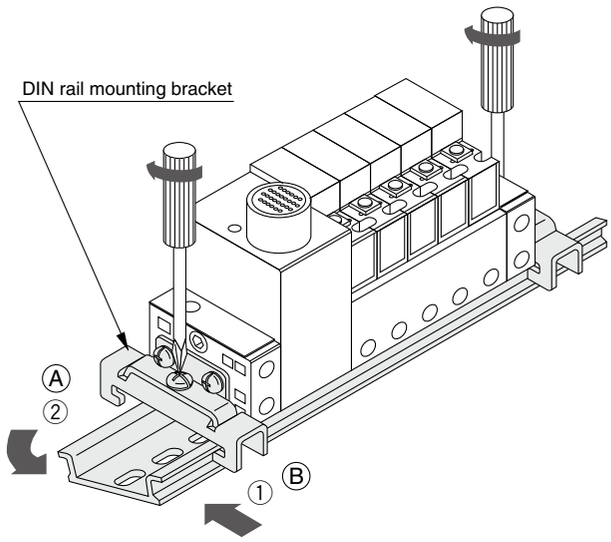

Removing

1) Loosen the clamp screw of the end plate on both sides.
2) Lift side Ⓐ of the manifold base and slide the end plate in the direction of ② shown in the figure to remove.

Mounting

1) Hook side Ⓑ of the manifold base on the DIN rail.
2) Press down side Ⓐ and mount the end plate on the DIN rail. Tighten the clamp screw on the side.
   Proper tightening torque of thread: 0.8 to 1.2 N·m

How to Calculate the Flow Rate

For obtaining the flow rate, refer to the Best Pneumatics No. 1
